

Calculator Hop Scotch

Getting ready

- Draw a large calculator. For younger kids, skip the multiplication and division signs.

How to play

- Player 1 jumps from square to square to make an equation
 - For example, $4+3=$
- Player 2 jumps on the answer, then jumps a different equation.
- Jumping can be done with one foot (for a challenge) or two feet
- Time challenge: a player tosses a rock onto a number. The other player sees how many equations they can jump that equal that number in one minute.
